Onshore oil and gas

Onshore oil and gas

Oil and gas is one of the areas that has been part of the Cost Engineering company since it was founded. Over the years Cost Engineering has been very active in the onshore field for clients all over the world. The projects that Cost Engineering has been involved in for these customers range from green field to maintenance projects.

Cost Engineering has not only served these clients in estimating, but also in areas like planning, cost control, contracting, quantity surveying, auditing, validation, asset verification, cost management, claim mediation, contract control and risk analysis. This makes Cost Engineering the default choice for many of our clients.

Cost Engineering has just finished a long term project with a group of Central and Eastern European companies who were in the process of revising a large part of their production facilities throughout Europe. For this combination of companies, Cost Engineering has audited all feed estimates and their related processes. This was not just a case of looking at the results on paper. It meant going out into the field to get a feel for the situation and applying that knowledge on information received from both owners as well as engineering contractors. During this project, Cost Engineering audited over a billion Euro's worth of projects both from an estimating as well as a planning point of view. As a final result the group of companies has a much clearer view of the cost involved in the project, resulting in reduced cost where possible.

In a different role Cost Engineering has assisted an engineering firm in the process of calculating the cost of a number of projects they are conducting for their clients. By using Cost Engineering as an independent third party, there have been no discussions about the estimates and negotiations can be focused on the technical aspects of the projects.

Cost Engineering can take the position you want for your project. A number of clients use Cost Engineering to monitor and index their contract rates on a yearly basis. Others ask Cost Engineering to supply knowledge to their organization. In the recent past that has meant that we supplied three cost control specialists to an international organization. In another example Cost Engineering provided a certified cost engineer to the daily maintenance organization for a refinery. During our presence new contracts were initiated, work processes streamlined and cost were reduced by introducing new ways for working with cost engineering tools.

Cost Engineering has always been at the heart of oil and gas. This means that we have a wealth of information to add value to your projects.

Cost Engineering has provided knowledge to:

StatoilHydro

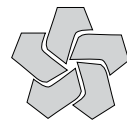

HUNTSMAN

bluewater

lyondellbasell

ALSTOM

gasunie

Heineken

STORK

Petroleum Development Oman
